

Fix the layout issue in this HADI app prototype screen:

Remove the blank white/empty space between the left sidebar and the main content panel. Make the dark teal sidebar and the main dark content area connect seamlessly with ****no gap, no divider, and no empty space**** in between.

The sidebar should sit directly adjacent to the main content so the overall layout feels continuous and full-width.

Keep everything else unchanged:

- Dark teal color scheme for both sidebar and main panel
- Hexagonal map in the upper part
- 'Devaraja West' zone details, badges (High Density, 3x Points, 0 Gems, Safety Score), and 'Zone Locked' message at the bottom
- All text, icons, and user profile section

Make the interface look clean, modern, and professionally aligned with proper container spacing and no visual breaks between navigation and content."
